### 3.6.4 Field Documentation

3.6.4.1 std::vector<voms> vomsdata::data

User's info, as in the certificate extension. It may contain data gathered from more than one VOMS server,

Definition at line 361 of file voms\_api.h.

3.6.4.2 verror\_type vomsdata::error

Error code

Definition at line 206 of file voms\_api.h.

3.6.4.3 std::string vomsdata::extra\_data

The data specified by the user with the --include switch.

Note that this field doesn't contain the result of a request to the VOMS server, but instead data specified by the user.

The reason for the introduction of this extension is to let a user include important data into his proxy certificate, like, for example, a kerberos ticket

Definition at line 365 of file voms\_api.h.

#### 3.6.4.4 std::string vomsdata::workvo

The value of the -vo option of the voms-proxy-init command
